

Latest fixes to ASAP.gov Application Implemented the week of 10/3/2005

Initiate Payment Request

Problem:

In the current .Gov code a user is provided an error message on Step 3 if they attempt to Initiate a Payment Request when the available balance is zero.

Resolution:

If a user tries to initiate a payment request when the available balance in the account is zero, the user will get a new error message on Step 2 as well as the existing error message on Step 3.

Data Retrieval Report

Problem:

The .Gov version of the Data Retrieval Report can not be run using the current date. The Mainframe version of this report can be run using the current date.

Resolution:

ASAP.gov will now allow users to run the Data Retrieval Report using the current date. This report will be delivered to the user on the next business day. Additionally, if a user cancels a payment request using either "cancel Payment Request" or "Modify Payment Request," the original payment request and the canceled payment request will no longer appear on the Data Retrieval Report. The original request and cancellation can be viewed using Canceled Payment Request reports and inquiries.

Agency Synchronization Report

Problem:

Some of the Account totals inside the Agency Synchronization file ASAP sends to the user do not agree with the same account totals contained in the Account Balance Inquiry.

Resolution:

The calculation of increases and decreases on the Agency Synchronization Report now result in the same data as the Account Balance Inquiry.
